

## Cable assemblies

### Description and purpose

Microwave cable assemblies are designed to connect DUT to measuring ports of instruments. Micran has developed cable assemblies with male-male, female-female and female-male connectors with inch or metric thread on 7.0/3.04 mm and 3.5/1.52 mm path side, and with inch thread in 2.92/1.27 mm path and metric thread in 2.4/1.04 mm path. KSA assemblies are supplied with external metal armor of 10.5 mm diameter. These cable assemblies provide lowest insertion loss and reflection coefficient. Used materials, wear-proof coating, cable armor and special cable attachment design provide high stability of parameters and long service life with a great number of connect/disconnect cycles at operating temperatures between -60 °C and +85 °C. Minimum screen attenuation is 100 dB. Custom cable assemblies with maximum operating temperatures up to +110 °C are available for ordering. When making your order, you may select cable length L from 300 mm to 15m. Also, you may select required cable assembly, using convenient tool Cable Assembly Selection Assistant at [www.micran.ru](http://www.micran.ru).
